PRECISION ACTUATORS

Perfection Servo services all makes and models rotary and linear precision actuators. We have repaired actuators as small as 2.3 kip and as large as 250 kip for many different applications within the testing industry. All incoming units are thoroughly inspected, cleaned, diagnosed, and repaired by skilled technicians who average over 20 years of experience. A typical repair of a precision actuator includes: grinding and chroming the rod, honing the tube, installing new seals, calibrating the LVDT, testing the actuator with its servo valves. As with every repair at Perfection, all actuators are returned with Perfection's 1 year in-service warranty.

The manufacturers we commonly service are:

- CGS Scientific
- Instron
- Moog
- MTS
- Parker
- Pegasus
- Team
- Vickers
